

Cable Support for NM Cables

Non-metallic • Easy installation

Arlington's non-metallic CS2 cable support holds up to four 14/2 to 10/2 flat, and two 14/3 to 10/3 NM cables – in any combination!

The CS2 cable support offers easy installation, in vertical or horizontal orientation. Simply position the support in the desired location on a wood (or metal) stud and drive in the shipped-in-place nail. Insert up to six cables. CS2 assures the installer that the cable(s) are properly positioned on the stud.

For metal studs, try the CS20SC. Designed for attachment to metal studs, it ships with an installed #8 self-tapping sheet metal screw for easy, screw-on installation.
