

## How to use the Furez FZ091LRG Series Locking RCA Connectors

Locking RCA connectors provide optimal force to maintain a good connector for the life of the cable by applying a constant pressure to the RCA mating jack. Unlike standard RCA connectors, a locking RCA connector will not fatigue or loosen due to age or repeated use.

1. Rotate the connector shell so it screws back towards the cable.
2. Push the connector and cable onto the RCA jack.
3. Rotate the connector shell so it screws towards the jack until tight. The connector should now be firmly in place and should require force to be removed.
