

The MX-900 is equipped with extraordinary “flexible memory architecture” that allows your professional installer/programmer to create unique features just for you. Would you like a set of one-touch “favorite channels” for your preschooler? How about a sports page with all of you favorite sports channels in one place—just one button away. The MX-900 can be programmed to your exact requirements. It’s entertainment made simple.

Your neighbors will turn green with envy when they see and here what your home theater can do—get ready to blush with pride! When you want to watch or listen to something, simply press the WATCH or LISTEN button, then select the activity you’d like. The MX-900 eliminates the nightmare of first setting up your TV, then your surround receiver, then your satellite receiver, and so on and so forth. With one touch the MX-900 takes care of everything and then signals it’s finished by displaying the new activity at the top of the screen and reconfiguring all of the buttons to operate everything you need with large, easy-to-read, seven-character labels.

No more cryptic icons! Never search for the PLAY button again. The hard-buttons are all clearly labeled with words—to watch your DVD simply press the button labeled PLAY.

Powered by inexpensive AA batteries, the MX-900 will retain all programmed instructions for up to ten years—even if the batteries fail or are removed.

MRF-300 Multi Zone RF Base Station

Your system becomes complete when you add at least one MRF-300 Base Station. It includes a controller and moveable antenna and allows your installer to “hide the wires” and fine tune the system for perfect remote control performance. With an MRF-300, the power of your remote can be expanded to control any system. It’s entertainment made simple.
